

Titel:

SIG Combibloc Energy Policy

Energy policy of SIG Combibloc

SIG Combibloc is one of the world's leading system manufacturers of carton packs and filling machines for beverages and food. To ensure that carton packs are among the most environmentally friendly packaging for long-life foods, SIG Combibloc aims to further reduce the ecological footprint of carton packs, filling machines and production processes. Consequently, SIG Combibloc has set itself the goal of continuously reducing energy consumption and CO₂ emissions at its packaging plants worldwide. A strategic milestone on this path is the introduction and implementation of an energy management system at the Linnich, Saalfelden and Wittenberg sites.

The following guidelines form the basis for improving the energy-related performance of our company at the Linnich, Saalfelden and Wittenberg sites.

- Systematic recording and evaluation of energy use and energy consumption
- Formulation and updating of targets and action plans for the continuous improvement of energy efficiency, taking into account economic efficiency and productivity.
- compliance with binding commitments concerning energy use, energy consumption and energy efficiency
- Provide the information necessary to improve energy-related performance.
- Consideration of energy efficiency in the design and procurement of plants, processes and services as well as in the procurement of energy
- Information and training of employees on the economical use of energy and the avoidance of unnecessary use of energy
- Control and documentation of development, objectives and measures through an energy management system with regular monitoring and evaluation

The management of the company and its employees are committed to adhering to these guidelines. In this context, the necessary structural, personnel and financial prerequisites are created. An energy management officer has been appointed for the Europe division and at all three locations, and energy teams have been formed.

An energy policy is subject to continuous change to the same extent as the economic environment. For this reason, the present energy policy is regularly reviewed and updated within the framework of management reviews.
