
ASSESSMENT PRODUCTS

GET THE SUPPORT
YOU NEED

TRAINING PRODUCT

With our assessment products we want to support our customers in the selection of the appropriate training and further education for their staff. This enables your employees to work with our machines as safely, efficiently and reliably as possible.

- ✓ Evaluate current knowledge status
- ✓ Identify gap qualification requirements
- ✓ Training recommendations to close the gap

WHAT DO WE OFFER?

ONLINE EVALUATION

Identifying knowledge gaps

Target group oriented recommendations

The current overall competence level of machine operators and maintenance personnel is recorded and transparently presented, using a web-based multiple-choice test. Online evaluation identifies general strengths and weaknesses of your personnel for each target group and on the basis of these outcomes, a basic qualification recommendation can be created for your staff.

ON-SITE EVALUATION

Evaluation of the handling of SIG equipment during production

Identifying knowledge gaps during production

Target group oriented recommendations

On-site evaluation is a production-accompanying analysis of the work processes. The handling of SIG equipment and production material during production is checked, as well as workflow and hygienic processes. The customer receives a wide-ranging report based on the findings of two SIG specialists, with corresponding recommendations.

PERSONNEL ASSESSMENT

Individual Staff Interviews in technical and operator topics

Evaluation of the handling of SIG equipment during assessment

Practical and theoretical assessment of personnel in all topics

Individual feedback and recommendations

For this product we carry out a series of exercises targeting up to two employees per day. These include packaging inspection, troubleshooting or other specific tasks under real, practical conditions. Theoretical testing of background knowledge and a personal interview completes the Personnel Assessment process. At the end of each assessment day, participants receive a face-to-face feedback. A detailed report and professional training recommendations for each individual employee are subsequently compiled and presented to the customer.

Further information can be obtained from your local SIG Combibloc Service Contact.
